We at IRUBIS are working together to revolutionize the monitoring and control of bioreactors. Our technology accelerates the development of drugs. We are looking for an experienced backend developer for our innovative optical analyzer.

You are responsible for the smooth connection of all software components to a robust overall system. A secure and open system architecture is particularly important to us, to support our customers within their daily work.

Your tasks
- Development of the new and maintaining of existing Backend-components
- Design of interfaces and the system architecture
- Consolidation of different software components
- Overall responsibility for the software development
- Further development of our RESTful API

Your profile
- Expert knowledge in Python (Django, Flask)
- At least 2 years of professional experience in backend software development
- Practical experience, ideally in a responsible position
- Independent working method
- Fluent English
- Experience in hardware interfaces
- Nice-to-have: OPC-UA, HDF5

Your benefits
- Flexible working hours, a great team and flat hierarchies
- Individual trainings
- Attractive salary
- Office centrally located in Munich
