IRUBIS is a young, growing biotechnology company specialized in monitoring and control of bioreactors. Our technology accelerates the development of drugs. We are looking for an experienced and frontend developer for our innovative optical analyzer.

We use state of the art frameworks to build the best possible front end to provide our customers with information about their bioprocesses in the lab, in the office and at home at any time. You will define and implement the multi-platform framework, which is the basis of our UI. This includes the intuitive visualization of large data sets, understandable UX and an aesthetic design.

Apply to IRUBIS and be part of a great team that aims to revolutionize the way biopharmaceuticals are produced.

**Your tasks**
- Develop a new front end from the ground up
- Definition of the software architecture, frameworks and tools to use
- Ensure that our complex data is presented to our users in the best possible way

**Your profile**
- Very good skills in web based front-end development
- You work independently and perfectly know your tools
- Experienced in visualization of scientific data
- Ambition to shape and build something new
- Basic skills in Python
- Experience in UI and UX
- "Nice-to-have": German language skills

**What we offer**
- Modern office space: centrally located in Munich
- Flexible working hours, a great team and flat hierarchies
- Exciting personal development opportunities

Does all this sound interesting to you? Then send us your curriculum vitae without a personal photo and working sample and salary expectation in a PDF document to you@irubis.com. Subject: HR2020_08_FE

Start time: flexible
